DETAILED ACTION

Election/Restrictions

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Group I, claims 2, 11, and 12, drawn to a catalyst bed.

Group II, claims 3-10, drawn to a lattice assembly.

Group III, claims 20-21, drawn to a skirt.

Group IV, claims 13 and 19, drawn to a primary support member.

Group V, claims 14-15, drawn to a burner.

Group VI, claims 16-18, drawn to a suspending means.

Claim 1 is generic. Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 1725

The special technical feature of Group I is the lattice assembly disposed beneath the primary supports, as recited in Claim 1. The forgoing special technical feature is shown in the prior art of Betteken et al. (4,195,064) in figure 6, item 13. Therefore, there is no contribution made over the prior art, hence there is no unity of invention and lack of unity is held by the Examiner.
